

## Orchestrate your model deployment with CircleCI and Amazon SageMaker

Hello,

Our new integration with Amazon SageMaker allows you to orchestrate model deployment across multiple environments, and to track and manage your releases from CircleCI.

The new CircleCI [SageMaker Orb](#) provides commands to configure and update SageMaker inference endpoints and deploy model versions to them.

This integration can help standardize your model development cycle, making it easy, repeatable, safe, and scalable.

You can find more information in our [documentation](#), or watch this [short video](#) to learn more.

### Ready to deploy to Amazon SageMaker?

Check out [our tutorial](#) for a step-by-step guide  
Visit [our sample repository](#) to get started quickly.

Thank you for supporting us and for being an active member of the CircleCI community.  
Best regards,  
Alex, Benny & Webster from the CircleCI Team

P.S. Our team is working on new features to improve this SageMaker integration: real-time monitoring of development progress, one-click rollbacks, and scale control, all managed through the CircleCI Releases UI.

Interested in testing these features? [Book some time to talk to us!](#)
